"Quality First" Approach

Cheetham Garam Indonesia is committed in maintaining and improving high quality products as well as food safety standards. All of our manufacturing sites maintain a fully integrated quality management system that is in accordance with Indonesian and International standards.

Cheetham Garam Indonesia's manufacturing sites are certified to the National Standard (SNI). All food products and food contact products have obtained Halal Certification from the Halal Product Assurance Organizing Body (BPJPH) in accordance with government regulations.
Cilegon site is also certified to FSSC 22000

Cheetham Garam Indonesia is committed to be a premier provider of value added solar salt. Our goal is to be a reliable and competitive supplier of salt to the worldwide market well into the future.

Nggolonio - Nagekeo

Construction of our latest processing facility located at Nggolonio was completed in September 2017. The factory is located adjacent to Mbay & Nggolonio salt field.

This production facility uses integrated technology combined with iodized manufacturing processes, is the first modern facility producing salt for human consumption in East Nusa Tenggara, Indonesia

Mbay - Nagekeo

In October 2019, Cheetham Flores Indonesia formerly announced that it had entered an investment agreement with local Government of Nagekeo for development of an area comprising 445 Ha.

Both projects in Nggolonio and Mbay will be uniquely diversified to supply local products and contribute to expanding operations within Indonesia by utilizing the overall company strengths and capabilities.

Pumping sea water into field began ten years from the day of signing the original Memorandum of Understanding in June 2010 with the Indonesian government to explore the feasibility of salt production in this area.

The perseverance over ten years to develop regional salt production facilities in Flores is an excellent demonstration of Cheetham Indonesia's commitment and company's values. We aim to continue to increase salt production volume and the supply of premium quality Salt production within Indonesia

Phase 1 construction was completed in 2023.
This area will progressively increase output over the next few years to eventually produce 25,000 TPA.
Phase 2 construction will commence in 2024 which will double the site output to 50,000 TPA.
